

Cross Section

Cross section shown intended to show flow paths only. Not representative of all valve configurations offered by Pneumadyne

Rely on Pneumadyne's fluid power expertise, design experience and manufacturing capabilities when developing your fluid handling applications

3-Way Normally Closed

Function

In the actuated position (figure A) air flows through port 1, travels around the lower o-ring and flows out port 2. The upper o-ring seals the passage preventing exhaust flow out port 3.

In the unactuated position (figure B) the lower o-ring seals the flow at port 1, allowing flow to enter port 2 travel around the upper seal and exhaust to atmosphere through port 3.
